

## Poligof invests in state of the art technology for its Mira plant in Italy

**September 10th, 2021** Poligof's board of directors have approved the investment in state of the art extrusion and printing for its Italian operations in Mira, near Venice.

The project includes the installation of a multilayer blown extrusion and MDO line, combined with an 8-colours flexo press. Both pieces of equipments will be supplied by Windmoeller & Hoelscher and will enable Poligof to increase its capacity for printed breathable films by 300mio m2 per annum.

Moreover, the investment will allow Poligof to match the growing demand for high-yield, low-gsm breathable films, and contribute to reducing the overall use of plastics in disposable hygiene products.

The installation will commence in Q4 2022 and it is expected to be completed at the end of Q1 2023.
